Adham (Leader – Java GUI architecture + hardest parts)

- **A0 – Confirm 5 Core Use Cases**
  - Final choice of the 5 core use cases from your previous diagrams.
  - Output: short list + 1–2 lines description each.
  - *Everyone else's work depends on this.*

Part 1 – Identify User and System Interfaces

- **A1 – Final User Interface List (Conceptual, not code)**
  - For each of the 5 use cases: define which **screens** / GUIs are needed.
  - Example (for Java): LoginFrame, AdminDashboardPanel, etc.
  - Output: table of UIs with purpose and main widgets.
  - *Depends on A0.*
  - *Many tasks below depend on A1.*
- **A2 – Final System Interface List**
  - Identify all **system interfaces**:
    - External systems, APIs, sensors (if any), external DBs, automated feeds.
  - Output: table with interface name, type, input, output, trigger.
  - *Depends on A0.*
  - *Ahmed's system-interface detailing depends on A2.*
- **A3 – Technical Report Integration (Part 1)**
  - Write/merge the **Part 1** section of the PDF:
    - Explain how you chose the use cases.
    - Include consolidated UI & system interface tables.
  - *Depends on A1, A2, and reviews from others.*

Part 2 – User Interface Design (Menus, Storyboards, Java GUI view)

- **A4 – Global Menu Architecture (Java GUI)**
  - Define main menu navigation concept:
    - e.g., main window with menu bar, side navigation, tabbed panes, etc.
  - Output:
    - Description of how menus map to Java components (JMenuBar, JMenu, main frames, etc.).
    - Finalized **menu hierarchy** structure.
  - *Depends on A1 and A0.*
  - *(Andrew's menu table refinement, Yassin's menu diagram, and everyone's Figma/storyboards depend on A4.)*
- **A5 – UI/UX Design Guidelines for Java + Figma**
  - Choose common style: colors, fonts, spacing, button styles, error messages.
  - Output: 1–2 page design guideline referenced by everyone.
  - *No hard dependency, but should be done early.*
  - *(Ahmed, Andrew, Yassin Figma screens depend on A5 to keep consistency.)*
- **A6 – Most Complex Figma Screens**
  - Design in Figma the **most complex screens** (e.g., dashboard or multi-step form) that will then be translated to Java GUI later.
  - *Depends on A1 and A5, and should be consistent with A4.*
- **A7 – Review & Approve All Storyboards and Figma Screens**
  - Check that every storyboard and screen matches:
    - The use cases.
    - Activity/sequence diagrams.
    - Java GUI architecture (menu, flows).
  - *Depends on: Andrew's, Ahmed's, and Yassin's storyboards and Figma (tasks B2–B4, C2–C3, D2–D3).*

- **A8 – Technical Report Integration (Part 2)**
  - Write Part 2 in the PDF:
    - Menu design section.
    - Storyboard descriptions.
    - UI screen descriptions, with references to Java GUI decisions.
  - *Depends on A4–A7.*

Part 3 – System Interface Design (Reports)

- **A9 – Complex Internal Report Design**
  - Design 1 **complex internal electronic report** (for internal users):
    - e.g., Java-generated management report/dashboard.
  - Output: structure, fields, filters, mockup.
  - *Depends on A2 and A0.*
- **A10 – Complex External Report Design**
  - Design 1 **complex external report** (for external users/system).
  - Output: structure, fields, format (PDF, CSV, etc.).
  - *Depends on A2 and A0.*
- **A11 – Technical Report Integration (Part 3)**
  - Describe all 4 reports (2 internal + 2 external) and how they will be implemented in Java (high-level).
  - *Depends on B5, C4, and A9–A10.*

Andrew

Part 1

- **B1 – Draft User Interface Descriptions for 2–3 Use Cases**
  - For 2–3 of the 5 use cases: propose which Java screens/panels are needed and their role.
  - *Depends on A0.*

    - *Will be reviewed and finalized in A1.*

Part 2

- **B2 – Menu Grouping Table (Draft)**
    - Create the **table** that maps the 5 use cases to menu categories:
        - Columns: Use Case, Menu Category, User Role, Frequency, Notes.
    - *Depends on A0 and partially on B1.*
    - *Adham uses this while doing A4; then you refine after A4.*
- **B3 – Storyboards for 2 Use Cases**
    - Create **2 storyboards** (tool of your choice) for 2 selected use cases.
    - The steps should match what later becomes Java GUI screens and events.
    - *Depends on A0 and A1 (so you know which screens exist) and A4 (final navigation idea).*
- **B4 – Figma Screens for 2 UIs**
    - Implement **2 Figma screens** for the UIs you documented in B1/B3.
    - Align with Adham's style guide (A5).
    - *Depends on A1, A4, and A5.*

Part 3

- **B5 – Simple Internal Electronic Output Report**
    - Design 1 simpler **internal report** (e.g., list, table).
    - *Depends on A2 and A0; integrated later by Adham in A11.*

Ahmed

Part 1

- **C1 – Detailed System Interface Specifications**
    - From A2, take some interfaces and document them deeply:
        - Data fields, direction, frequency, error cases.
    - *Depends on A2 (Adham's final interface list) and A0.*

Part 2

- **C2 – Storyboards for 1–2 Use Cases (System-heavy)**
  - For use cases that involve external systems/DB:
    - Show how the user and system interact step-by-step.
  - *Depends on A0, A1, and C1; and should respect A4 navigation.*
- **C3 – Figma Screens for 1–2 UIs**
  - Implement 1–2 screens in Figma related to those system-heavy use cases.
  - *Depends on A1, A4, and A5.*

Part 3

- **C4 – Simple External Electronic Output Report**
  - Design 1 simpler **external report** (for clients/partners, etc.).
  - *Depends on A2 and A0; integrated later into A11.*

Yassin

Part 1

- **D1 – Validation of 5 Use Cases & Interfaces**
  - Cross-check Adham's selection (A0) with previous diagrams.
  - Check that every chosen use case has:
    - At least one UI.
    - Relevant system interfaces if needed.
  - *Depends on A0, A1, and A2.*

Part 2

- **D2 – Menu Design Diagram (Hierarchy & Flow)**
  - Draw the final **menu hierarchy and navigation flow** (e.g., main window → submenus → dialogs).
  - Make it easy to map to future Java JFrame/JPanel structure.
  - *Depends on A4 and B2 (table).*

- **D3 – Storyboard + Figma for 1 UI**
    - Choose 1 remaining use case:
        - Create 1 storyboard.
        - Create 1 matching Figma screen.
    - *Depends on A0, A1, A4, and A5.*

Part 3

- **D4 – Jira Timeline Setup**
    - Create the full Jira plan for all the above tasks (A*, B*, C*, D*).
    - Assign issues and set dependencies in Jira.
    - *Should be done early, but refined as tasks become clearer.*
- **D5 – GitHub Organization & Final Commit**
    - Ensure:
        - All diagrams, Figma exports, and the final PDF are pushed.
        - Java GUI project (if started) has a clean structure.
    - *Depends on almost everything: especially A3, A8, A11.*

Adham (Lead)

- Define and justify the five core use cases (UC01, UC02, UC03, UC06, UC07) and document assumptions and traceability to Deliverable 3 artifacts.
- Finalize the complete UI list (UI01–UI12) and the UI-to-use-case mapping table with consistent naming across report and Figma.

- Design and finalize the full menu hierarchy and navigation flow so it matches the use cases, storyboards, and screens.
- Write and finalize the UI/UX guidelines section (colors, validation, error handling, feedback) and ensure they are applied consistently in the screens.
- Integrate all sections into one clean technical report PDF and fix formatting issues (captions, headings, page numbers, duplicates) and remove any non-required sections.

Ahmed

- Create and refine the doctor schedule screens and required state variants in Figma (UI04, UI09, UI09b) based on the storyboard flow.
- Perform a consistency cleanup in Figma so all frames match UI01–UI12 naming and shared components/styles are reused.
- Verify the UC-03 storyboard steps are visually represented in the corresponding screens and export clean screenshots for the report.

Andrew

- Produce the menu grouping table mapping the five use cases to menu categories, roles, frequency, and rationale.
- Rewrite the UI descriptions section as one-to-two lines per UI (UI01–UI12) without implementation details.
- Review the document structure for clarity and consistency (titles, labels, ordering) and flag any missing or duplicated content.

Yassin

- Create the storyboards for UC01, UC02, UC03, UC06, and UC07 with clear step-by-step user actions and system responses aligned to the diagrams.
- Create the menu hierarchy and navigation flow diagram (D2) showing login-to-dashboard and dashboard-to-screen transitions.
- Cross-check that every storyboard step has a matching UI screen and that every UI screen is reachable through the menu/navigation.
