User Story : Doctor & Staff Management

As a hospital administrator, I want to manage comprehensive staff profiles and assign duties efficiently so that I can ensure optimal hospital operations, proper staffing coverage, and maintain high-quality patient care standards .

Acceptance Criteria

Acceptance Criterion 1: New Staff Registration

- Given a new staff member has been hired and completed onboarding
- When I create their profile in the system with personal details, qualifications, certifications, and employment information
- Then the system generates a unique staff ID, creates login credentials, and assigns appropriate system access permissions based on their role

Acceptance Criterion 2: Role Assignment and Management

- Given a staff member profile exists in the system
- When I assign or modify their role (Doctor, Nurse, Technician, Administrative Staff)
- Then the system updates their access permissions, available modules, and displays role-specific dashboards and functionalities

Acceptance Criterion 3: Schedule Creation and Management

- Given I need to create weekly schedules for hospital staff
- When I access the scheduling module and assign shifts, departments, and duties to staff members
- Then the system checks for conflicts, validates certification requirements for assigned duties, and generates the complete schedule with notifications sent to affected staff

Acceptance Criterion 4: Qualification and Certification Tracking

- Given staff members have various certifications and licenses
- When I view or update a staff profile
- Then the system displays all current certifications, license expiry dates, and automatically generates alerts 30 days before any certification expires

Acceptance Criterion 5: Staff Performance and Availability Management

- Given I need to monitor staff performance and availability
- When I access staff management reports

- Then the system displays attendance records, performance metrics, leave balances, and availability status for effective resource planning

Acceptance Criterion 6: Department and Specialty Assignment

- Given that the hospital has multiple departments and specialties
- When I assign staff to specific departments or rotate them between units
- Then the system updates their access to department-specific resources, patient lists, and ensures proper handover documentation

Acceptance Criterion 7: Emergency Staffing and On-Call Management

- Given emergency situations require immediate staff availability
- When I activate emergency staffing protocols
- Then the system automatically identifies available on-call staff, sends priority notifications, and tracks response times for compliance reporting
