User Story : Patient Management

As a receptionist, I want to register new patients and edit existing patient records so that I can maintain accurate, complete, and up-to-date patient information for quality healthcare delivery .

Acceptance Criteria

Acceptance Criterion 1: New Patient Registration

- Given a new patient arrives for their first visit
- When I enter their personal information (name, DOB, contact details, insurance, emergency contact)
- Then the system creates a unique patient ID, validates required fields, and generates a new patient profile with confirmation message

Acceptance Criterion 2: Patient Information Validation

- Given I am registering or updating patient information
- When I enter patient data in the registration form
- Then the system validates email format, phone number format, insurance ID format, and prevents duplicate patient records based on name and date of birth

Acceptance Criterion 3: Patient Record Editing

- Given an existing patient needs to update their information
- When I access their patient profile and modify details (address, phone, insurance, emergency contact)
- Then the system saves the changes, maintains an audit trail of modifications, and displays the updated information immediately

Acceptance Criterion 4: Comprehensive Patient Profile Display

- Given a patient is registered in the system
- When I search for and view the patient profile
- Then the system displays complete patient details including demographics, medical history, past appointments, current medications, allergies, and insurance information in an organized layout

Acceptance Criterion 5: Patient Search and Retrieval

- Given multiple patients are registered in the system
- When I search for a patient using name, phone number, or patient ID

- Then the system displays matching results ranked by relevance and allows me to select the correct patient profile

Acceptance Criterion 6: Data Privacy and Security

- Given I am accessing patient records
- When I view or edit patient information
- Then the system logs my access for audit purposes, displays only information relevant to my role, and automatically logs me out after 30 minutes of inactivity

Acceptance Criterion 7: Insurance Verification Integration

- Given a patient provides insurance information during registration
- When I enter their insurance details
- Then the system attempts real-time insurance verification and displays coverage status, copay amounts, and any pre-authorization requirements
